

Microsoft Office Forms Server 2007

Microsoft Office Forms Server 2007 provides scalable, standards-based electronic forms solutions with enhanced security that can help an organisation to extend the reach of forms-driven business processes to anyone with a web browser.

Microsoft Office Forms Server 2007 is a server product built on Microsoft Windows SharePoint Services 3.0. It enables users to fill out Microsoft Office InfoPath 2007 forms by using a Web browser instead of, or in addition to, the Office InfoPath 2007 client program. This allows wider access to forms than was possible with previous versions of Microsoft Office InfoPath. In addition, Office Forms Server 2007 provides a central location to store and manage form templates for your organisation.
