

Key SharePoint Products and Technologies

SharePoint Products and Technologies can be configured to meet an organisation's specific web application needs.

Microsoft provide a detailed description of its SharePoint Products and Technologies via a downloadable MS-Word document (circa 5MB). You can use this link to [Download the MOSS 2007 Evaluation Guide](#) from the Microsoft website.

The full range of capabilities available via SharePoint Products and Technologies are delivered through the following products:

[Windows SharePoint Services 3.0](#)

Available as part of Microsoft Windows Server 2003, WSS 3.0 provides the base SharePoint functionality which is extended by other SharePoint Products & Technologies.

[Microsoft Office SharePoint Server 2007](#)

Extending WSS 3.0 to provide comprehensive content management and enterprise search, accelerating shared business processes and supporting information-sharing across boundaries for better decision-making.

[MOSS 2007 for Search](#)

A standard component of MOSS 2007, MOSS 2007 for Search can be implemented 'standalone' or to extend the functionality of WSS 3.0, providing the ability to search for information in enterprise intranet and web sites.

[Microsoft Office Forms Server 2007](#)

Microsoft Office Forms Server 2007 provides scalable, standards-based electronic forms solutions with enhanced security that can help an organisation to extend the reach of forms-driven business processes to anyone with a web browser.
