

Why Choose Cubik for MOSS 2007?

Two key reasons to consider Cubik for your MOSS 2007 implementation project.

There are many implementers of [Microsoft Office SharePoint Server 2007](#) ('MOSS 2007') with an understanding of the document management and collaborative working capabilities of MOSS. Cubik's expertise in this area means that Cubik is an equal to any of these organisations. However, it is in the area of web content management that Cubik truly differentiates itself.

Cubik has more than 100 live websites deployed upon Microsoft Content Management Server 2002 ('MCMS 2002'), Microsoft's predecessor to MOSS 2007. This is more than any other Microsoft Certified Partner by some significant distance. Cubik's skills in web content management are directly transferable to MOSS 2007, giving Cubik a unique advantage when it comes to addressing a project where the web forms a major focus of the project deliverable.

Our expertise exhibits itself in two ways:

1. Our evident understanding of the issues associated with the implementation of a contemporary web solution (accessibility, ease of navigation, effective design);
2. Our ability to accelerate the implementation using our [E-Business Developer Suite](#) (EBDS), a software solution which builds upon core MOSS 2007 functionality to deliver the most commonly requested functional enhancements to the base MOSS product. Clients who license the EBDS as part of their implementation benefit from ongoing product development and can see the functionality delivered by the MOSS 2007-based website continue to evolve over time by virtue of future upgrades and enhancements to the EBDS.
