

What is OneStopCMS?

OneStopCMS is the unique and cost-effective way to build a content managed website.

Introduction

OneStopCMS provides you with a highly functional, hosted, professional website that you can easily update yourself. Create and remove sections and sub-sections with ease and enter the text and images for each page as easily as you would create a document using MS-Word.

You can easily schedule pages to appear on your site in the future, and set a date when they will remove themselves - ideal for promotions and special offers!

You can also specify a workflow pattern so that all of your staff can create pages, but none of those pages will go live on the website until you approve them. This allows you to share the work of maintaining your site without compromising on quality.

OneStopCMS is powered by industry-leading software from Microsoft. Licensing of the Microsoft software is covered in an annual 'right-to-use' fee, as are hosting, backup and a full Help Desk support service.

Value Proposition

Cubik has an innovative approach to OneStopCMS website development. We maintain a single application which develops in line with customer requirements. As new core functionality is added to the solution, it becomes available to every OneStopCMS client. Consequently, our longest-established client has as functional a solution as our most recent client.

OneStopCMS websites offer exceptional value; clients can invest in the solution knowing that it will evolve to remain contemporary and will continue to meet their needs.

Find out More

OneStopCMS is ideal for organisations of any size that are seeking a robust, scaleable and highly-functional website solution without incurring the level of cost and management overhead associated with the traditional approach to such projects.
